DETAILS / KEEP FOR REFERENCE

SOURCE: GRAPHIC COMPETITIONS

The CG Robots Challenge is designed with 3D artists in mind who are interested in exploring new concepts and creating something fresh and mind-bending.

The new generation of robots is nothing like the sandwich-maker-type of machines that we thought them to be 20 years ago. Modern robots can look and behave like humans, pushing the imagination boundaries to extreme lengths. Can you imagine (and 3D model) the future today?

There are two categories:

• Best 3D Robot Model • Best 3D Robots Portfolio

You can have as much entry models as you want. By uploading more than 10 entry models you are eligible to enter Portfolio category too.

There is no entry fee.

ELIGIBILITY

The challenge is open to everyone, including teams, legal entities and people from all over the world.

PRIZE

There will be one winner and two runner-ups in each category.

Designers will be competing to win Motion Design Bundles by Video Copilot, iClone Animation Pipeline Toolkits by Reallusion, two KeyShot5 licenses by Luxion, one CGschool video from V-Ray or 3ds Max by CG School.
